

## The Reformed Objection to Natural Theology

*Christian Scholar's Review* 11, no. 3 (1982): 187-198.

Suppose we think of natural theology as the attempt to prove or demonstrate the existence of God. This enterprise has a long and impressive history—a history stretching back to the dawn of Christendom and boasting among its adherents many of the truly great thinkers of the Western world. Chief among these is Thomas Aquinas, whose work, I think, is the natural starting point for Christian philosophical reflection, Protestant as well as Catholic. Here we Protestants must be, in Ralph McInerny's immortal phrase, Peeping Thomists. Recently—since the time of Kant, perhaps—the tradition of natural theology has not been as overwhelming as it once was: yet it continues to have able defenders both within and without officially Catholic philosophy.<sup>1</sup>

Many Christians, however, have been less than totally impressed. In particular Reformed or Calvinist theologians have for the most part taken a dim view of this enterprise. A few Reformed thinkers—B. B. Warfield<sup>2</sup> for example—endorse the theistic proofs; but for the most part the Reformed attitude has ranged from indifference, through suspicion and hostility, to outright accusations of blasphemy. And this stance is initially puzzling. It looks a little like the attitude some Christians adopt towards faith healing: it can't be done, but even if it could, it shouldn't be. What exactly, or even approximately, do these sons and daughters of the Reformation have against proving the existence of God? What *could* they have against it? What could be less objectionable to any but the most obdurate atheist?

Let's begin with the nineteenth-century Dutch theologian Herman Bavinck:

Scripture urges us to behold heaven and earth, birds and flowers and lilies, in order that we may see and recognize God in them. "Lift up your eyes on high, and see who hath created these" Is. 40:26. Scripture does not reason in the abstract. It does not make God the conclusion of a syllogism, leaving it to us whether we think the argument holds or not. But it speaks with authority. Both theologically and religiously it proceeds from God as the starting point.<sup>3</sup>

We receive the impression that belief in the existence of God is based entirely upon these proofs. But indeed that would be "a wretched faith, which, before it invokes God, must first prove his existence." The contrary, however, is the truth.... Of the existence of self, of the world round about us, of logical and moral laws, etc., we are so deeply convinced because of the indelible impressions which all these things make upon our consciousness that we need no arguments or demonstration. Spontaneously, altogether involuntarily: without any constraint or coercion, we accept that existence. Now the same is true in regard to the existence of God. The so-called proofs are by no means the final grounds of our most certain conviction that God exists: This certainly is established only by faith; i.e., by the spontaneous testimony which forces itself upon us from every side.<sup>4</sup>

According to Bavinck, then, a Christian's belief in the existence of God is not based upon proofs or arguments. By "argument" here, I think he means arguments in the style of natural theology—the sort given by Aquinas and Scotus and later by Descartes, Leibniz, Clarke, and others. And what he means to say, I think, is that Christians don't *need* such arguments. Don't need them for what?

Here I think Bavinck means to hold two things. First, arguments or proofs are not, in general, the source of the believer's confidence in God. Typically, the believer does not believe in God on the basis of arguments; nor does he believe such truths as, for example, that God has created the world on the basis of arguments. Secondly, argument is not needed for *rational justification*; the believer is entirely within his

epistemic right in believing that God has created the world, even if he has no argument at all for that conclusion. The believer doesn't need natural theology in order to achieve rationality or epistemic propriety in believing; his belief in God can be perfectly rational even if he knows of no cogent argument, deductive or inductive, for the existence of God—indeed, even if there *isn't* any such argument.

Bavinck has three further points. First he means to add, I think, that we *cannot* come to knowledge of God on the basis of argument; the arguments of natural theology just don't work. (And he follows this passage with a more or less traditional attempt to refute the theistic proofs, including an endorsement of some of Kant's fashionable confusions about the ontological argument.) Secondly, Scripture “proceeds from God as the starting point,” and so should the believer. There is nothing by way of proofs or arguments for God's existence in the Bible; that is simply presupposed. The same should be true of the Christian believer then; he should *start* from belief in God, rather than from the premises of some argument whose conclusion is that God exists. What is it that makes those premises a better starting point anyway? And third, Bavinck points out that belief in God relevantly resembles belief in the existence of the self and of the external world—and, we might add, belief in other minds and the past. In none of these areas do we typically *have* proof or arguments, or need proofs or arguments.

According to John Calvin, who is as good a Calvinist as any, God has implanted in us all an innate tendency, or *nisus*, or disposition to believe in him:

There is within the human mind, and indeed by natural instinct, an awareness of divinity. This we take to be beyond controversy. To prevent anyone from taking refuge in the pretense of ignorance, God himself has implanted in all men a certain understanding of his divine majesty. Ever renewing its memory, he repeatedly sheds fresh drops. Since, therefore, men one and all perceive that there is a God and that he is their Maker, they are condemned by their own testimony because they have failed to honor him and to consecrate their lives to his will. If ignorance of God is to be looked for anywhere, surely one is most likely to find an example of it among the more backward folk

and those more remote from civilization. Yet there is, as the eminent pagan says, no nation so barbarous, no people so savage, that they have not a deep-seated conviction that there is a God. So deeply does the common conception occupy the minds of all, so tenaciously does it inhere in the hearts of all! Therefore, since from the beginning of the world there has been no region, no city, in short, household, that could do without religion, there lies in this a tacit confession of a sense of deity inscribed in the hearts of all.<sup>5</sup>

Indeed, the perversity of the impious, who though they struggle furiously are unable to extricate themselves from the fear of God, is abundant testimony that this conviction, namely, that there is some God, is naturally inborn in all, and is fixed deep within, as it were in the very marrow.... From this we conclude that it is not a doctrine that must first be learned in school, but one of which each of us is master from his mother's womb and which nature itself permits no one to forget.<sup>6</sup>

Calvin's claim, then, is that God has created us in such a way that we have a strong propensity or inclination towards belief in him. This tendency has been in part overlaid or suppressed by sin. Were it not for the existence of sin in the world, human beings would believe in God to the same degree and with the same natural spontaneity that we believe in the existence of other persons, an external world, or the past. This is the natural human condition; it is because of our presently unnatural sinful condition that many of us find belief in God difficult or absurd. The fact is, Calvin thinks, one who doesn't believe in God is in an epistemically substandard position—rather like a man who doesn't believe that his wife exists, or thinks she is like a cleverly constructed robot and has no thoughts, feelings, or consciousness.

Although this disposition to believe in God is partially suppressed, it is nonetheless universally present. And it is triggered or actuated by widely realized conditions:

Lest anyone, then, be excluded from access to happiness, he not only sowed in men's minds that seed of religion of which we have spoken, but revealed himself and daily discloses himself in the whole workmanship of the universe. As a consequence, men cannot open their eyes without being compelled to see him.<sup>7</sup>

Like Kant, Calvin is especially impressed in this connection, by the marvelous compages of the starry heavens above:

Even the common folk and the most untutored, who have been taught only by the aid of the eyes, cannot be unaware of the excellence of divine art, for it reveals itself in this innumerable and yet distinct and well-ordered variety of the heavenly host.<sup>8</sup>

And Calvin's claim is that one who accedes to this tendency and in these circumstances accepts the belief that God has created the world—perhaps upon beholding the starry heavens, or the splendid majesty of the mountains, or the intricate, articulate beauty of a tiny flower—is entirely within his epistemic rights in so doing. It isn't that such a person is justified or rational in so believing by virtue of having an implicit argument—some version of the teleological argument, say. No; he doesn't need any argument for justification or rationality. His belief need not be based on any other propositions at all; under these conditions he is perfectly rational in accepting belief in God in the utter absence of any argument, deductive or inductive. Indeed, a person in these conditions, says Calvin, *knows* that God exists, has knowledge of God's existence, apart from any argument at all.

Elsewhere Calvin speaks of “arguments from reason” or rational arguments:

The prophets and apostles do not boast either of their keenness or of anything that obtains credit for them as they speak; nor do they dwell upon rational proofs. Rather, they bring forward God's holy name, that by it the whole world may be brought into obedience to him. Now we ought to see how apparent it is not only by plausible opinion but by dear truth that they do not call upon God's name heedlessly or falsely. If we desire to provide in the best way for our consciences—that they may not be perpetually beset by the instability of doubt or vacillation, and that they may not also boggle at the smallest quibbles—we ought to seek our conviction, in a higher place than human reasons, judgments, or conjectures, that is, in the secret testimony of the Spirit.<sup>9</sup>

Here the subject for discussion is not belief in the existence of God, but belief that God is the author of the Scriptures; I think it is clear, however, that Calvin would say the same thing about belief in God's existence.

The Christian doesn't need natural theology, either as the source of his confidence or to justify his belief. Furthermore, the Christian *ought* not to believe on the basis of argument; if he does, his faith is likely to be unstable and wavering. From Calvin's point of view, believing in the existence of God on the basis of rational argument is like believing in the existence of your spouse on the basis of the analogical argument for other minds—whimsical at best and not at all likely to delight the person concerned.

## FOUNDATIONALISM

We could look further into the precise forms taken by the Reformed objection to natural theology; time is short, however; what I shall do instead is tell you what I think underlies these objections, inchoate and unfocused as they are. The reformers mean to say, fundamentally, that belief in God can properly be taken as basic. That is, a person is entirely within his epistemic rights, entirely rational, in believing in God, even if he has no argument for this belief and does not believe it on the basis of any other beliefs he holds. And in taking belief in God as properly basic, the reformers were implicitly rejecting a whole picture or way of looking at knowledge and rational belief; call it classical foundationalism. This picture has been enormously popular ever since the days of Plato and Aristotle; it remains the dominant way of thinking about knowledge, justification, belief, faith, and allied topics. Although it has been thus dominant, Reformed theologians and thinkers have, I believe, meant to reject it. What they say here tends to be inchoate and not well-articulated; nevertheless the fact is they meant to reject classical foundationalism. But how shall we characterize the view rejected? The first thing to see is that foundationalism is a normative view. It aims to lay down conditions that must be met by anyone whose system of beliefs is rational; and here 'rational' is to be understood normatively. According to the foundationalist, there is a right way and a wrong way with respect to belief. People have responsibilities, duties and obligations with respect to their believings just as with respect to their (other) actions. Perhaps this sort of obligation is really a special case of a more general moral obligation; or perhaps, on the other hand, it is *sui generis*.

In any event there are such obligations: to conform to them is to be rational and to go against them is to be irrational. To be rational, then, is to exercise one's epistemic powers *properly*—to exercise them in such a way as to go contrary to none of the norms for such exercise.

Foundationalism, therefore, is in part a normative thesis. I think we can understand this thesis more fully if we introduce the idea of a *noetic structure*. A person's noetic structure is the set of propositions he believes together with certain epistemic relations that hold among him and these propositions. Thus some of his beliefs may be *based on* other things he believes; it may be that there are a pair of propositions A and B such that he believes A *on the basis of* B. Although this relation isn't easy to characterize in a revealing and nontrivial fashion, it is nonetheless familiar. I believe that the word 'umbrageous' is spelled u-m-b-r-a-g-e-o-u-s: this belief is based on another belief of mine, the belief that that's how the dictionary says it's spelled. I believe that  $72 \times 71 = 5112$ . This belief is based upon several other beliefs I hold—such beliefs as that  $1 \times 72 = 72$ ;  $7 \times 2 = 14$ ;  $7 \times 7 = 49$ ;  $49 + 1 = 50$ ; and others. Some of my beliefs, however, I accept but don't accept on the basis of any other beliefs. I believe that  $2 + 1 = 3$ , for example, and don't believe it on the basis of other propositions. I also believe that I am seated at my desk, and that there is a mild pain in my right knee. These too are basic for me; I don't believe them on the basis of any other propositions.

An account of a person's noetic structure, then, would include a specification of which of his beliefs are basic and which are non-basic. Of course it is abstractly possible that none of his beliefs is basic; perhaps he holds just three beliefs, A, B, and C, and believes each of them on the basis of the other two. We might think this improper or irrational, but that is not to say it couldn't be done. And it is also possible that all of his beliefs are basic; perhaps he believes a lot of propositions, but doesn't believe any of them on the basis of any others. In the typical case, however, a noetic structure will include both basic and non-basic beliefs.

Secondly, an account of a noetic structure will include what we might call an index of degree of belief. I hold some of my beliefs much more firmly than others. I believe both that  $2 + 1 = 3$  and that London,

England, is north of Saskatoon, Saskatchewan; but I believe the former more resolutely than the latter. Here we might make use of the personalist<sup>10</sup> interpretation of probability theory; think of an index of degree of belief as a function  $Ps(A)$  from the set of propositions a person S believes or disbelieves into the real numbers between 0 and 1.  $Ps(A) = n$ , then, records something like the degree to which S believes A, or the strength of his belief that A.  $Ps(A) = 1$  proclaims S's utter and abandoned commitment to A;  $Ps(A) = 0$  records a similar commitment to not-A;  $Ps(A) = .5$  means that S, like Buridan's ass, is suspended in equilibrium between A and not-A. We could then go on to consider whether the personalist is right in holding that a rational noetic structure conforms to the Calculus of Probability.<sup>11</sup>

Thirdly, a somewhat vaguer notion; an account of S's noetic structure would include something like an index of depth of ingression. Some of my beliefs are, we might say, on the periphery of my noetic structure. I accept them, and may even accept them quite firmly; but if I were to give them up, not much else in my noetic structure would have to change. I believe there are some large boulders on the top of the Grand Teton. If I come to give up this belief, however (say by climbing it and not finding any), that change wouldn't have extensive reverberations throughout the rest of my noetic structure; it could be accommodated with minimal alteration elsewhere. So its depth of ingression into my noetic structure isn't great. On the other hand, if I were to come to believe that there simply is no such thing as the Grand Teton, or no mountains at all, or no such thing as the state of Wyoming, that would have much greater reverberations. And if, *per impossible*, I were to come to think there hadn't been much of a past (that the world was created just five minutes ago, complete with all its apparent memories and traces of the past), or that there weren't any other persons, that would have even greater reverberations; these beliefs of mine have great depth of ingression into my noetic structure.

Now classical foundationalism is best construed, I think, as a thesis about *rational* noetic structures. A noetic structure is rational if it could be the noetic structure of a person who was completely rational. To be completely rational, as I am here using the term, is not to believe only what is true, or to believe all the logical consequences of what one

believes, or to believe all necessary truths with equal firmness, or to be uninfluenced by emotion; it is, instead, to do the right thing with respect to one's believings. As we have seen, the foundationalist holds that there are responsibilities and duties that pertain to believings as well as to actions, or other actions; these responsibilities accrue to us just by virtue of our having the sorts of noetic capabilities we do have. There are norms or standards for beliefs. To criticize a person as irrational, then, is to criticize her for failing to fulfill these duties or responsibilities, or for failing to conform to the relevant norms or standards. From this point of view, a rational person is one whose believings meet the appropriate standards. To draw the ethical analogy, the irrational is the impermissible; the rational is the permissible.

A rational noetic structure, then, is one that could be the noetic structure of a perfectly rational person. And classical foundationalism is, in part, a thesis about such noetic structures. The foundationalist notes, first of all, that some of our beliefs are based upon others. He immediately adds that a belief can't properly be accepted on the basis of just any other belief; in a rational noetic structure, A will be accepted on the basis of B only if B *supports* A, or is a member of a set of beliefs that together support A. It isn't clear just what this supports relation is; different foundationalists propose different candidates. One candidate, for example, is *entailment*; A supports B only if B is entailed by A, or perhaps is self-evidently entailed by A, or perhaps follows from A by an argument where each step is a self-evident entailment. Another and more permissive candidate is probability; perhaps A supports B if B is likely or probable with respect to A. And of course there are other candidates.

More important for present purposes, however, is the following claim: in a rational noetic structure, there will be some beliefs that are not based upon others: call these its foundations. If every belief in a rational noetic structure were based upon other beliefs, the structure in question would contain infinitely many beliefs. However things may stand for more powerful intellects—angelic intellects, perhaps—human beings aren't capable of believing infinitely many propositions. Among other things, one presumably doesn't believe a proposition one has never heard of, and no one has had time, these busy days, to have heard of infinitely many propositions. So every rational noetic structure has a foundation.

Suppose we say that weak foundationalism is the view that (1) every rational noetic structure has a foundation, and (2) in a rational noetic structure, non-basic belief is proportional in strength to support from the foundations. When I say Reformed thinkers have meant to reject foundationalism, I do not mean to say that they intended to reject weak foundationalism. On the contrary; the thought of many of them tends to support or endorse weak foundationalism. What then do they mean to reject? Here we meet a further and fundamental feature of classic varieties of foundationalism: they all lay down certain conditions of proper or rational basicity. From the foundationalist point of view, not just any kind of belief can be found in the foundations of a rational noetic structure; a belief, to be properly basic (i.e., basic in a rational noetic structure) must meet certain conditions.

It is plausible to see Thomas Aquinas, for example, as holding that a proposition is properly basic for a person only if it is self-evident to him (such that his understanding or grasping it is sufficient for his seeing it to be true) or 'evident to the senses,' as he puts it. By this latter term I think he means to refer to propositions whose truth or falsehood we can determine by looking or listening or employing some other sense—such propositions as

(1) There is a tree before me

(2) I am wearing shoes

and

(3) That tree's leaves are yellow.

Many foundationalists have insisted that propositions basic in a rational noetic structure must be *certain* in some important sense. Thus it is plausible to see Descartes as holding that the foundations of a rational noetic structure don't include such propositions as (1)-(3) but more cautious claims—claims about one's own mental life, for example:

(4) It seems to me that I see a tree

(5) I seem to see something green

or, as Professor Chisholm puts it,

(6) I am appeared greenly to.

Propositions of this latter sort seem to enjoy a kind of immunity from error not enjoyed by those of the former. I could be mistaken in thinking I see a pink rat; perhaps I am hallucinating or the victim of an illusion. But it is at the least very much harder to see that I could be mistaken in believing that I seem to see a pink rat, in believing that I am appeared pinkly (or pink ratly) to. Suppose we say that a proposition with respect to which I enjoy this sort of immunity from error is *incorrigible* for me; then perhaps Descartes means to hold that a proposition is properly basic for S only if it is either self-evident or incorrigible for S.

Aquinas and Descartes, we might say, are strong foundationalists; they accept weak foundationalism and add some conditions for proper basicity. Ancient and medieval foundationalists tended to hold that a proposition is properly basic for a person only if it is either self-evident or evident to the senses; modern foundationalists—Descartes, Locke, Leibniz, and the like—tended to hold that a proposition is properly basic for S only if either self-evident or incorrigible for S. Of course this is a historical generalization and is thus subject to contradiction by scholars, such being the penalty for historical generalization; but perhaps it is worth the risk. And now suppose we say that *classical foundationalism* is the disjunction of ancient and medieval with modern foundationalism.

### THE REFORMED REJECTION OF CLASSICAL FOUNDATIONALISM

These Reformed thinkers, I believe, are best understood as rejecting classical foundationalism.<sup>12</sup> They were inclined to accept weak foundationalism, I think; but they were completely at odds with the idea that the foundations of a rational noetic structure can at most include propositions that are self-evident or evident to the senses or incorrigible. In particular, they were prepared to insist that a rational noetic structure can include belief in God as basic. As Bavinck put it “Scripture ... does not make God the conclusion of a syllogism, leaving it to us whether we think the argument holds or not. But it speaks with authority” Both theologically and religiously it proceeds from God as the starting point.

And of course Bavinck means to say that we must emulate Scripture here.

In the passages I quoted earlier on, Calvin claims the believer doesn't need argument—doesn't need it, among other things, for epistemic respectability. We may understand him as holding, I think, that a rational noetic structure may perfectly well contain belief in God among its foundations. Indeed, he means to go further, and in two separate directions. In the first place, he thinks a Christian *ought* not believe in God on the basis of other propositions; a proper and well-formed Christian noetic structure will in fact have belief in God among its foundations. And in the second place Calvin claims that one who takes belief in God as basic can nonetheless know that God exists. Calvin holds that one can *rationally accept* belief in God as basic; he also claims that one can know that God exists even if he has no argument, even if he does not believe on the basis of other propositions. A weak foundationalist is likely to hold that some properly basic beliefs are such that anyone who accepts them, knows them. More exactly, he is likely to hold that among the beliefs properly basic for a person S, some are such that if S accepts them S knows them. A weak foundationalist could go on to say that *other* properly basic beliefs can't be known, if taken as basic, but only rationally believed; and he might think of the existence of God as a case in point. Calvin will have none of this; as he sees it, one needs no arguments to know that God exists.

Among the central contentions of these Reformed thinkers, therefore, are the claims that belief in God is properly basic, and the view that one who takes belief in God as basic can also know that God exists.

### THE GREAT PUMPKIN OBJECTION

Now I enthusiastically concur in these contentions of Reformed epistemology, and by way of conclusion I want to defend them against a popular objection. It is tempting to raise the following sort of question. If belief in God is properly basic, why can't just any belief be properly basic? Couldn't we say the same for any bizarre aberration we can think of? What about voodoo or astrology? What about the belief that the

Great Pumpkin returns every Halloween? Could I properly take that as basic? And if I can't, why can I properly take belief in God as basic? Suppose I believe that if I flap my arms with sufficient vigor, I can take off and fly about the room; could I defend myself against the charge of irrationality by claiming this belief is basic? If we say that belief in God is properly basic, won't we be committed to holding that just anything, or nearly anything, can properly be taken as basic, thus throwing wide the gates to irrationalism and superstition?

Certainly not. What might lead one to think the Reformed epistemologist is in this kind of trouble? The fact that he rejects the criteria for proper basicity purveyed by the classical foundationalist? But why should *that* be thought to commit him to such tolerance of irrationality? Consider an analogy. In the palmy days of positivism, the positivists went about confidently wielding their verifiability criterion and declaring meaningless much that was obviously meaningful. Now suppose someone rejected a formulation of that criterion—the one to be found in the second edition of A. J. Ayer's *Language, Truth and Logic*, for example. Would that mean she was committed to holding that

(7) Twas brillig; and the slithy toves did gyre and gymblye in the wabe,

contrary to appearances, makes good sense? Of course not. But then the same goes for the Reformed epistemologist; the fact that he rejects the criteria of classical foundationalism does not mean that he is committed to supposing just anything is properly basic.

But what then is the problem? Is it that the Reformed epistemologist not only rejects those criteria for proper basicity, but seems in no hurry to produce what he takes to be a better substitute? If he has no such criterion, how can he fairly reject belief in the Great Pumpkin as properly basic?

This objection betrays an important misconception. How do we rightly arrive at or develop criteria for meaningfulness, or justified belief, or proper basicity? Where do they come from? Must one have such a criterion before one can sensibly make any judgments—positive or negative—about proper basicity? Surely not. Suppose I don't know of a

satisfactory substitute for the criteria proposed by classical foundationalism; I am nevertheless entirely within my rights in holding that certain propositions are not properly basic in certain conditions. Some propositions seem self-evident when in fact they are not; that is the lesson of some of the Russell Paradoxes.<sup>13</sup> Nevertheless it would be irrational to take as basic the denial of a proposition that seems self-evident to you. Similarly, suppose it seems to you that you see a tree; you would then be irrational in taking as basic the proposition that you don't see a tree, or that there aren't any trees. In the same way, even if I don't know of some illuminating criterion of meaning, I can quite properly declare (7) meaningless, even if I don't have a successful substitute for the positivist's verifiability criterion.

And this raises an important question—one Roderick Chisholm has taught us to ask. "What is the status of criteria for meaningfulness, or proper basicity, or justified belief? These are typically universal statements. The modern foundationalist's criterion for proper basicity, for example, is doubly universal:

(8) For any proposition A and person S, A is properly basic for S if and only if A is incorrigible for S or self-evident to S.

But how does one know a thing like that? Where does it come from? (8) certainly isn't self-evident or just obviously true. But if it isn't, how does one arrive at it? What sorts of arguments would be appropriate? Of course a philosopher might find (8) so appealing that he simply takes it to be true, neither offering argument for it, nor accepting it on the basis of other things he believes. If he does so, however, his noetic structure will be self-referentially incoherent. (8) itself is neither self-evident nor incorrigible; hence in accepting (8) as basic, the classical foundationalist violates the condition of proper basicity he himself lays down in accepting it. On the other hand, perhaps the philosopher has some argument for it from premises that are self-evident; it is exceedingly hard to see, however, what such arguments might be like. And until he has produced such arguments, what shall the rest of us do—we who do not find (8) at all obvious or compelling? How could he use (8) to show us that belief in God, for example, is not properly basic? Why should we believe (8), or pay it any attention?

The fact is, I think, that neither (8) nor any other revealing necessary and sufficient condition for proper basicity follows from obviously self-evident premises by obviously acceptable arguments. And hence the proper way to arrive at such a criterion is, broadly speaking, *inductive*. We must assemble examples of beliefs and conditions such that the former are obviously properly basic in the latter, and examples of beliefs and conditions such that the former are obviously not properly basic in the latter. We must then frame hypotheses as to the necessary and sufficient conditions of proper basicity and test these hypotheses by reference to those examples. Under the right conditions, for example, it is clearly rational to believe that you see a human person before you a being who has thoughts and feelings, who knows and believes things, who makes decisions and acts. It is clear, furthermore, that you are under no obligation to reason to this belief from others you hold; under those conditions that belief is properly basic for you. But then (8) must be mistaken; the belief in question, under those circumstances, is properly basic, though neither self-evident nor incorrigible for you. Similarly, you may seem to remember that you had breakfast this morning, and perhaps you know of no reason to suppose your memory is playing you tricks. If so, you are entirely justified in taking that belief as basic. Of course it isn't properly basic on the criteria offered by classical foundationalists; but that fact counts not against you but against those criteria.

Accordingly, criteria for proper basicity must be reached from below rather than above; they should not be presented as *obiter dicta*, but argued to and tested by a relevant set of examples. But there is no reason to assume, in advance, that everyone will agree on the examples. The Christian will of course suppose that belief in God is entirely proper and rational; if he doesn't accept this belief on the basis of other propositions, he will conclude that it is basic for him and quite properly so. Followers of Bertrand Russell and Madalyn Murray O'Hair may disagree; but how is that relevant? Must my criteria, or those of the Christian community, conform to their examples? Surely not. The Christian community is responsible to its set of examples, not to theirs.

Accordingly, the Reformed epistemologist can properly hold that belief in the Great Pumpkin is not properly basic, even though he holds that belief in God is properly basic and even if he has no full-fledged

criterion of proper basicity. Of course he is committed to supposing that there is a relevant *difference* between belief in God and belief in the Great Pumpkin, if he holds that the former but not the latter is properly basic. But this should be no great embarrassment; there are plenty of candidates. Thus the Reformed epistemologist may concur with Calvin in holding that God has implanted in us a natural tendency to see his hand in the world around us; the same cannot be said for the Great Pumpkin, there being no Great Pumpkin and no natural tendency to accept beliefs about the Great Pumpkin.

By way of conclusion then, the Reformed objection to natural theology, unformed and inchoate as it is, may best be seen as a rejection of classical foundationalism. As the Reformed thinker sees things, being self-evident, or incorrigible, or evident to the senses is not a necessary condition of proper basicity. He goes on to add that belief in God is properly basic. He is not thereby committed, even in the absence of a general criterion of proper basicity, to suppose that just any or nearly any belief—belief in the Great Pumpkin, for example—is properly basic. Like everyone should, he begins with examples; and he may take belief in the Great Pumpkin as a paradigm of irrational basic belief.

## NOTES

1. See, for example, James Ross, *Philosophical Theology* (Indianapolis, Ind.: Bobbs-Merrill, 1969), and Richard Swinburne, *The Existence of God* (Oxford, England: Clarendon Press, 1979).
2. "God," in *Studies in Theology* (New York: Oxford University Press, 1932), pp. 110-11.
3. *The Doctrine of God*, trans. William Hendriksen (Grand Rapids, Mich.: William B. Eerdmans, 1951). This is a translation of vol. 2 of Bavinck's *Gereformeerde Dogmatiek* (Kampen, the Netherlands: Kok, 1918), p. 76.
4. *Ibid.*, p. 78.
5. *Institutes of the Christian Religion*, ed. J. T. McNeill and trans. Ford Lewis Battles (Philadelphia: Westminster Press, 1960), Book I, Chap. iii, sec. 1.
6. *Institutes*, I, iii, 3.
7. *Institutes*, V, v, 1.

8. *Institutes*, V, v, 2.
9. *Institutes*, I, vii, 4.
10. See, for example, Richard Jeffrey's *The Logic of Decision* (New York: McGraw-Hill, 1965).
11. See my paper "The Probabilistic Argument from Evil," *Philosophical Studies* 30 (1979): 21.
12. Here I think they were entirely correct; both ancient and modern foundationalism are self-referentially incoherent. See my paper "Is Belief in God Rational?" [*Rationality and Religious Belief*, ed. C. Delany (South Bend, Ind.: University of Notre Dame Press, 1979)] p. 26.
13. "Is Belief in God Rational?" p. 22.
14. *The Problem of the Criterion* (Milwaukee, Wis.: Marquette University Press, 1973)
