

Generating a Direct Kaltura Link for H5P, Pressbooks, or podcast aggregators

These instructions explain how to generate a direct link from your Kaltura media entry for use with H5P, Pressbooks, or a podcast aggregator. The entry must be either Unlisted or Published in order for this to work. You can find instructions on changing your media entry's publication status here:

<https://iweb.langara.ca/lts/mediaspace/managing-media/#mediaspacepublishingmedia>

To Generate a Direct Link

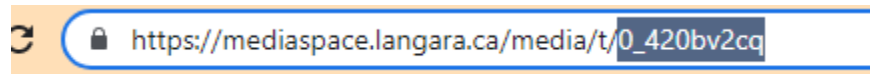

Take this URL:

https://api.ca.kaltura.com/p/138/sp/16200/playManifest/entryId/0_bamcuute/format/url/flavorParams/0

And replace the **entryID** with the Entry ID for your media entry.

https://api.ca.kaltura.com/p/138/sp/16200/playManifest/entryId/0_bamcuute/format/url/flavorParams/0

You can find the Entry ID by going to your video's entry page and looking in the address bar.

Copy and paste the Entry ID to replace the Entry ID in the example URL.

Your URL should look like this:

https://api.ca.kaltura.com/p/138/sp/16200/playManifest/entryId/0_420bv2cq/format/url/flavorParams/0

Copy and paste that URL into your browser. It will load the media entry with a different URL that looks like this:

https://vodcdn.ca.kaltura.com/p/138/sp/13800/serveFlavor/entryId/0_420bv2cq/v/12/ev/8/flavorId/0_h5ykyo3r/forceproxy/true/name/a.mp4

This is the direct link. Copy and paste the new URL into the appropriate field in H5P, Pressbooks, or your podcast aggregator.
