

USE THE KEYBOARD TO ZOOM IN/OUT IN A BROWSER

What's in it for me?

Many documents and websites open with a preset zoom at 100%. Sometimes it works and sometimes it does not. All browsers enable users to zoom in or out, though the menu commands can be tricky to find quickly. The keyboard offers shortcuts to quickly zoom in, zoom out or zoom back to 100%. These keyboard shortcuts work on all common browsers, on both PC and MAC.

How to do this:

We zoom in/out using the **Ctrl** key on the PC, the **Command** key on the MAC.

1. To ZOOM in, Press these 2 keys: Ctrl +
2. To zoom out, Press these 2 keys: Ctrl -
3. To reset the zoom, Press these 2 keys: Ctrl 0
